Product Description

New Energy Vehicle Hybrid BYD Song Electric Car Plus DM-i Flagship

The BYD Song Plus is a hybrid car model produced by BYD Auto, a Chinese automobile manufacturer. The Song Plus is a hybrid electric vehicle (HEV), which means it combines both an internal combustion engine (ICE) and an electric motor with a battery pack. This combination allows for improved fuel efficiency and reduced emissions compared to conventional gasoline-only vehicles.

The hybrid powertrain of the Song Plus typically consists of an internal combustion engine, an electric motor, and a battery pack. The powertrain is designed to optimize fuel efficiency by utilizing electric power during low-demand situations and switching to the internal combustion engine when needed.

The electric motor in the Song Plus provides additional power and assists the internal combustion engine during acceleration or when extra power is required. This electric assistance helps improve overall performance and fuel efficiency.

Hybrid cars often employ regenerative braking, which allows the electric motor to act as a generator and convert kinetic energy into electrical energy during braking. This energy is then stored in the battery pack for later use, further improving efficiency.
